Helping robots and humans learn to play nicely together

.....
"In Isaac Asimov's classic series of short stories I, Robot, he lists the first law of robotics as, "A robot may not injure a human being or, through inaction, allow a human being to come to harm." Yet in the real world of warehouses and distribution centers, there is no such caveat. As a result, robotics are usually either isolated completely or cordoned off by fences, light curtains or other barriers in order to prevent humans from putting themselves in harm's way..."

.....

The Wynright automated robotic truck loader (RTL) brings the benefits of robotics to the shipping department, by saving time and money in what is sure to be the last horizon of automation: fully cubed truck loading. It's so unique, it is patented.

Introducing the RTL

CHECK US OUT

Visit us at our New Website!

At 40 years, we've taken a single-minded approach and unified Midco, Lighthouse Selections and our Automotion® conveyor equipment company, all onto one website. We think you will find it easier to use. Check us out at www.wynright.com.

ABOUT WYNRIGHT

Wynright Corporation is the nation's leading independent, U.S.-based provider of intelligent material handling systems.

Since its founding in 1972, Wynright has been a trusted partner to some of the world's largest and fastest-growing companies, showing them how to use their space more efficiently to deliver improved productivity, today and tomorrow.

For more information on our services, technology and product portfolio, please visit: www.wynright.com

Robotic technology for truck loading/unloading

In distribution systems, floor loading of over-the-road trailers and shipping containers is common. Robotics is the solution to this time and labor intensive process.

Palletized AGV trailer loading Wynright provides an automated solution for loading trailers with palletized product. We have integrated guided vehicles, capable of safely and automatically loading common over-the-road trailers for several of our clients.

Robotic truck loading Wynright provides solutions for dead stacking directly onto the floor of a truck or container. We have developed a patented truck loading system capable of safely and economically fluid loading product directly into trailers.

Robotic truck unloading With 3-D vision to locate product inside the truck or container, Wynright's truck-loading application can be adapted to unload cargo containers and trailers.

About our author: Tim Criswell is President, Wynright Robotics at Wynright Corporation, a leading, independent U.S.-based provider of intelligent material handling systems. With more than 200 engineers in-house, Wynright designs, manufactures, integrates and installs a full spectrum of intralogistics solutions, offering both Wynright-branded and third-party equipment to meet client needs. Criswell has over twenty years' experience in developing robotic systems, has written several papers for conferences and academic journals, and has spearheaded robotic patents for Wynright Corporation.
